

Turn Up the Heat on Energy Recovery Ventilation

TEMPEFF  
**AIR HANDLING UNITS**  
for Commercial and Industrial Applications

Fully conditions the mixed or outside air to achieve optimal comfort and well-being for all.

At Tempeff, we have a passion for innovative solutions for the HVAC market, driving us to continually seek technological advancements, while recognizing unique needs. While we are incredibly proud of our DualCore® and DualCorePlus™ technology – being frost resistant and of the highest efficiency available – we understand not all buildings or mechanical designs lend themselves to this technology. We are pleased to announce that we now offer customized air handling unit options with or without energy recovery.

# TEMPEFF AIR HANDLING UNITS

## How Does Customized Air Handling Unit Applications Compare to Conventional HVAC Systems?

Our customized air handling units are engineered with a focus on flexibility, performance, and durability. Two inch (R-13) foam injected panels, multiple fan options, VFDs, heating, cooling, and single point power are just the start of our customized units' capabilities.

When building design and special requirements may create limitations for standard HVAC systems, our customized applications confidently fit any need, while allowing for equipment servicing and replacement when needed.

## Why Introduce Air Handling Units to The Tempeff Lineup?

Not all system design concerns are answered with the same cookie cutter approach. We believe each system is unique, with its' own specialized needs. With this understanding, our engineering team proudly develops our products to ensure they meet any unique need. Whether it be budget, configuration, unit dimensions, performance, or delivery, we are committed to do our utmost to meet all your needs.

While we stand behind our DualCore® and DualCorePlus™ offerings, and firmly believe they offer the highest energy efficiency available today, we are excited to release this new option to the Tempeff lineup.

## How Does this Affect Your Bottom Line?

Our customized air handling unit applications result in ongoing operational cost savings, fabricated specifically for your unique design requirements and budget, while our simplified mechanical systems lower long-term maintenance costs.

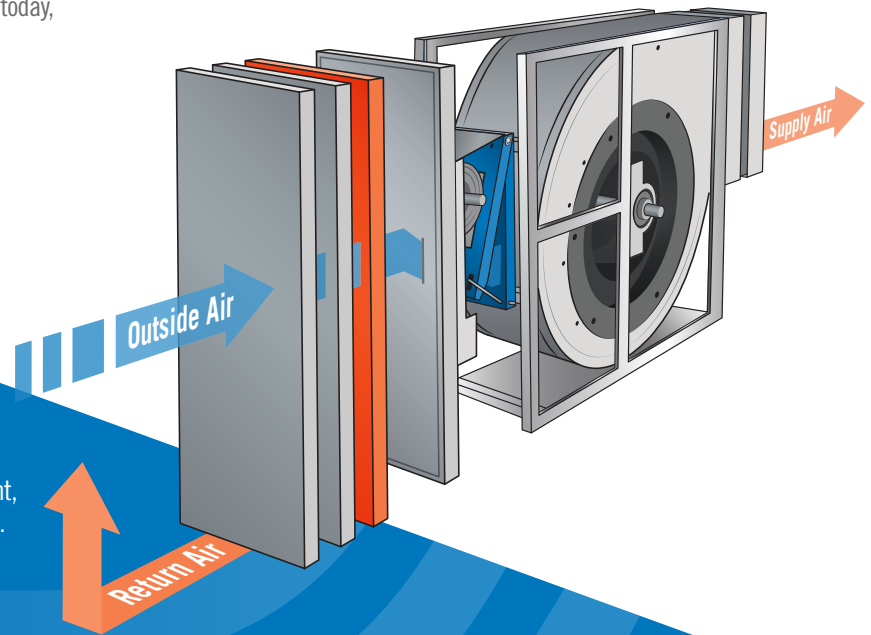

## The Tempeff Experience

We love to serve, and serve well, priding ourselves on being easy to do business with. We aspire to this principle in our relations with a positive, "can-do" attitude, while placing a priority on being responsive. Everyone at Tempeff is either directly helping a customer with a Tempeff solution, or assisting someone who is. At Tempeff, we care.

## Tempeff Air Handling Unit Design Specs\*

- 2" foam injected panels (R13)
- Single Point Power
- Electric Coils
- Service Corridors
- Humidification
- Fan Arrays
- VFD's
- HW Coils
- Gas Burners
- UV Lights
- Ionization

\*Many additional options are readily available.

## Find Out More!

Learn more about how Tempeff's air handling unit and custom fit solutions can reduce initial investment in your HVAC equipment, while solving unique building and mechanical design challenges. Looking for a Tempeff rep? We'll locate a rep in your area today!
